L4 ANSWER 1 OF 14 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)
 itself a mono- or dis-azo dye or contains such a dye, D2 has the same definition as D1 or is a radical of formula (II), wherein (Q3)0-3 denotes from 0 to 3 identical or different substituents selected from the group halogen, C1-C4 alkyl, C1-C4 alkoxy, carboxy and sulfo and Z1 is a radical of formula -SO2-Y (3a), -NH-CO-(CH2)m-SO2-Y (3b), -CONH-(CH2)n-SO2-Y (3c), -NH-CO-CH(Hal)-CH2-Hal (3d) or -NH-CO-C(Hal):CH2 (3e), Y is vinyl or a -CH2-CH2-U radical and U is a group that is removable under alk. conditions, m and n are each independently of the other the no. 2, 3 or 4,

and Hal is halogen. The dye mixts. are suitable for dyeing cellulosic or amide-group-contg. fiber materials (e.g., cotton fabrics) with good fastness properties.

AB The invention relates to azo dyes (I; M = H, alkali metal, 1/2 alkaline earth metal; R, R1 = H, Cl-4-alkyl, sulfomethyl; X1, X2 = optionally substituted aryl), their production, and their use for dyeing or printing fibrous materials containing hydroxy and/or carbonamide groups. I confer scarlet to

L4 ANSWER 2 OF 14 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)
reddish brown shades which show good color strength and fastness characteristics. In an example, 2,4,6-trifluoropyrimidine was condensed (1:1) with 2,4-diaminobenzenesulfonic acid to provide a diazo component which was coupled with 4-hydroxy-7-(sulfomethylamino)-2-naphthalenesulfonic acid to give a reddish orange monoazo dye. This dye was coupled with diazotized 4-(2-sulfatoethylsulfonfyl)aniline to provide
a disazo reactive dye (λ_{max} 496 nm), scarlet red on cotton.

AB The dye is that represented as I [D = coupler residue; X = CO, SO₂, n = 0,

1; R₁-R₄ = H, Cl-4 alkyl, alkoxy, sulfonic acid, carboxy; A, B = halogen, OH, (substituted) amino, heterocycle; m = 1, 2]. The dye is used for printing or dyeing of paper without environment pollution by wastewater. Thus, reaction of cyanuric chloride, diethylaminopropylamine, morpholine, and 4,4'-diaminobenzanilide gave a diazo component, which was coupled

with 3-methyl-5-pyrazolone to give the dye. A sheet of paper was dyed with the dye to give a light- and moisture-resistant yellow sheet with high color d. associated with release of colorless wastewater.

AB The invention relates to mixts. of one or more 1-amino-8-hydroxynaphthalenedisulfonic acid-based disazo dyes, one or more 6-amino-3-sulfo-1-naphthol-based disazo dyes, and optionally 1 or more other naphthalene group-containing azo dyes. The reactive dye mixts., which

can be prepared chemical or by phys. blending, provide fast black shades on cotton. In an example, 4-(2-sulfatoethylsulfonyl)aniline was diazotized and coupled with a mixture of 1-amino-8-hydroxynaphthalene-3,6-disulfonic acid and 4-hydroxy-7-(sulfomethylamino)naphthalene-2-sulfonic acid, followed by a second coupling with 7'-acetamido-4-hydroxynaphthalene-2-sulfonic acid to give a black mixture of reactive azo dyes.

AB Cellulosic fibers are dyed with reactive dyes coordinatable with Cu and then treated with copper to improve colorfastness. The dyed products are also claimed. Thus, a cotton fabric was dyed in an aqueous dyeing bath containing a reactive triazo dye and anhydrous Glauber's salt, mixed with Na₂CO₃ and washed to give a dyed fabric showing deep bluish red. Dipping the dyed fabric in an aqueous solution containing Cu sulfate, heating to 60°, keeping at this temperature for 20 min, washing, soaping, dewatering and drying gave a fabric showing deep bordeaux color with lightfastness rating 5 and washfastness rating 4-5.

AB The title dyes providing cotton dyeings excellent in fastness to both chlorine water and perspiration-light combination have the free-acid form I (R = fiber-reactive group residue based on N-heterocycles containing halogen; R1, R2, R3 = H, Me, OMe, OEt, Cl, CO2H, OH, SO3H, NO2, NHAc, NHCONH2, SO2NH2, SO2Me, SO2CH2CH2OH; R4, R5 = OMe, OEt, NHAc, Me; R6 = Me, Et, Ph; R7, R8 = SO3H, CO2H, Me, Cl, NO2, H). Condensate of cyanuric chloride with 2,5-HO(H2N)C6H3CO2H and 2,5-(H2N)2C6H3SO3H was diazotized and coupled with 1,6,3-HO(MeNH)C10H5SO3H, and the resulting azo compound coupled with diazotized 2-H2NCH4SO3H → 2,5-MeOMeC6H3NH2 and salted to give I (R = Q; R1 = 2-SO3H; R2 = R3 = R8 = H; R4 = 5-OMe; R5 = 2-Me; R6 = Me; R7 = 2-SO3H; Na salt).

AB Trisazo direct dyes of free acid form I (R = H, Me, Ph; R1 = Ac, PhSO2, MeC6H4SO2, ClC6H4SO2, R2; R3 = HO, CO2H, or SO3H group-containing, aliphatic amine residue or morpholino) were prepared which can be used together with a

disperse and cationic dye in dyeing cotton-polyester and cotton-acrylic blends, resp., in navy blue shades. For example, 4,3-H2N(MeO)C6H3C6H3(OMe)NH2-3,4 [119-90-4] was tetrazotized and coupled with 1,8,3,6-(4-MeC6H4SO2NH)(HO)C10H4(SO3H)2 [6860-97-5] and then 1,2,5,7-[2,4-(HO2C)(O2N)C6H3N:N](H2N)(HO)C10H4SO3H [61827-73-4] and salted to give I (R = H; R1 = 4-MeC6H4SO2) [82382-81-8].

AB Azo dyes are produced by coupling hydroxybenzoquinolines with diazotized amines of the structure AN:NBH₂, in which A is an aromatic radical of the iso or heterocyclic series and may also contain an arylazo group as a substituent, and B is a radical of mono and dinuclear, aromatic-isocyclic, possibly substituted, hydrocarbons and in which the azo and amino groups are in 1,4- or 1,4'-position to each other and in which at least the NH₂ group is in ortho position to a metalizable group or substituent which can be converted to one. The phenols are 2-hydroxy-4-methyl(hydroxysulfonyl)quinolines, the benzo groups being in 5,6- or 7,8-position, and the coupling taking place in ortho position to the isocyclically bound OH group. These dyes are dark powders, soluble in alkali and whose salts are olive, green, and blue to gray. The materials are suitable for dyeing cellulose, particularly cotton, the dyes then being fixed with agents giving off Cu. The dyeings are fast to light and washing. Some of the water-soluble complexes may be used as such. Some of the dyes are fast to anti-creasing treatments. Thus, 41.7 parts of the coupled product of diazotized 5-amino-2-hydroxybenzene-1-carboxylic acid (I) and 1-amino-2-methoxy-naphthalene-6-sulfonic acid (II) is diazotized at 15° in the reverse manner and coupled at 0-5° with 2-hydroxy-4-methyl-5,6-(3'-hydroxybenzo)quinoline-5'-sulfonic acid (III) 32.3, the dye being precipitated with NaCl, filtered off, and washed. The diazo dye is useful for dyeing cellulose fibers in wet- and light-fast blue-gray colors. The fastness is improved by aftercoupping. Diazotized 4'-amino-4-(6-sulfonaphtho-1,2,4,5-triazol-2-yl)stilbene-2,2'-disulfonic acid is coupled in HOAc with II. The product is diazotized in the reverse manner and coupled with 2-hydroxy-4-methyl-5,6-(4'-hydroxybenzo)quinoline-6'-sulfonic acid (IV). The product is converted to the Cu complex and dyes cotton and cellulose in green shades fast to light. Both shade and light-fastness are only slightly influenced by anti-creasing processes. Tetrazotized o-dianisidine (V) is coupled with 1-hydroxynaphthalene-3,8-disulfonic acid. The product is diazotized and coupled with IV giving a precipitate which is complexed with Cu giving a dark powder (VI). This is soluble in water with a blue color, and dyes cotton, linen, and regenerated cellulose in lightfast shades which are barely influenced by anti-crease treatment. The dye produced from coupling tetrazotized benidine, salicylic acid (VII), and II is diazotized and

L4 ANSWER 11 OF 14 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)

PAGE 2-A

Me

L4 ANSWER 12 OF 14 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)
 coupled with III. The triazo dye renders cotton and regenerated cellulose blue-green shades from an aq. bath. Aftercoupping produces dyeings of excellent wash- and light fastness. The compd. from diazotized

I and 1-aminonaphthalene-6-sulfonic acid is diazotized and coupled with 1-amino-2,5-dimethoxybenzene. The product is further diazotized and coupled with III. This material dyes cotton and regenerated cellulose in blue-gray shades whose light- and wash-fastness is increased by aftercoupping. The dye from diazotized

5-amino-3-sulfo-2-hydroxybenzene-1-carboxylic acid and 1-aminonaphthalene-7-sulfonic acid is diazotized and

coupled with II. This is further diazotized and coupled with III to give a dye which renders cotton blue-green shades which are fast to light and washing when aftercoupped. Tetrazotized V is partially coupled with the compd. formed by coupling diazotized 2-aminobenzenes-1-carboxylic acid and 2-amino-5-naphthol-7-sulfonic acid. The diazo disazo compd. is coupled with III to produce a dye which renders cotton dark navy-blue shades, which when aftercoupped are fast to light. VI 2 in a bath contg. water 3000 and Na₂CO₃ 1 is used to dye 100 parts of cotton at 40-50°. Within 30 min., the bath is raised to 90-5°, Na₂SO₄ 30 is added, and the dyeing continued for 45 min. The goods are then rinsed.

AB Copperable dyes of the structure I, in which R is H, an alkyl,

cycloalkyl,

aralkyl, or aryl group, Z is a OH or COOH group, E is an enolizable keto group, and in which ring A may be further substituted, are prepared from tetrazotized compds. of the 4,4'-diamino-3,3'-dicarboxybiaryl (II) family, 1 mole of M, and 1 mole of a compound containing a group

C:C(OH). The coupling can take place in any desired order in alkaline media. These dyes

render cotton and regenerated cellulose violet-red shades which are displaced to gray or deep black by after coppering. The materials are fast to light, washing, perspiration, and are distinguished by very good discharge-ability. The dyes also reserve acetate silk. Thus, II 27.2,

is tetrazotized and treated with the amino azo compound (III) 51.4

(obtained by

coupling diazotized 2-amino-1-phenol-4-sulfonamide with 2-phenylamino-5-naphthol-7-sulfonic acid (IIIA), Na₂CO₃ 10, and water 900 parts. Then concentrated aqueous Na₂CO₃ 30 parts is added, thus forming the diazo

disazo compound. The mixture is then treated with a solution of acetoacetamidobenzene (IV) 17.7 in water 600 parts, stirred, cooled, and the trisazo compound (V) salted out with NaCl, filtered and dried. V is a

dark powder, soluble in water giving a violet-red solution which dyes

cotton and

regenerated cellulose black by the 1- or 2-bath coppering process.

Similarly, are prepared dyes from (components given; color on cellulose black): II, 2-acetoacetamido-6-naphthalenesulfonic acid, compound from diazotized 2,4-H₂N(O₂N)C₆H₃OH and IIIA; and II, III, IV, and 1-phenyl-3-methyl-2-pyrazolin-5-one.

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB Disazo dyes based on naphthalene derivs. having a OH group in 1 position, a sulfonate group in the 2 and 3 positions, a sulfonate group in the 3 position, and an amino group in the 6 position are mixed with (dis) azo dyes having sulfo groups or pyridinone groups and, optionally, a sulfonate group in the 1 position, an amino group in the 6 position, an amino group in the 5 position, a sulfonate group in the 3 position and, optionally, a sulfonate group in the 2 position to give compns. for dyeing OH- or amide-containing fibers with good wet- and lightfastness and low staining of polyamide fibers when used for cotton-polyamide blend textiles. A typical mixture for printing of cotton fabrics contained 50 parts electrolyte powder containing 70% disazo dye I and 50 parts electrolyte powder containing 75% disazo dye II.

AB The invention relates to azo dyes (I; M = H, alkali metal, 1/2 alkaline earth metal; R, R1 = H, C1-4-alkyl, sulfomethyl; X1, X2 = optionally substituted aryl), their production, and their use for dyeing or printing fibrous materials containing hydroxy and/or carbonamide groups. I confer scarlet to reddish brown shades which show good color strength and fastness characteristics. In an example, 2,4,6-trifluoropyrimidine was condensed (1:1) with 2,4-diaminobenzenesulfonic acid to provide a diazo component which was coupled with 4-hydroxy-7-(sulfomethylamino)-2-naphthalenesulfonic acid to give a reddish orange monoazo dye. This dye was coupled with diazotized 4-(2-sulfatoethylsulfonyl)aniline to provide

AB Mixts. of disazo dyes are disclosed which are based on 8-amino-1-naphthol-4(and/or 3),6-disulfonic acid as coupling component(s) and vinyl sulfone-containing diazo components. The mixts. may be obtained by mech. mixing of the dyes or by direct production from multiple diazo and coupling components. The mixts. provide fast greenish navy blue shades on cotton fabrics. In an example, a mixture of 4-(2-sulfatoethylsulfonfyl)aniline and 2,5-dimethoxy-4-(2-sulfatoethylsulfonfyl)aniline was diazotized and coupled with 8-amino-1-naphthol-3,6-disulfonic acid followed with a second coupling with diazotized 2-methoxy-5-methyl-4-(2-sulfatoethylsulfonfyl)aniline to give a mixture of 2 disazo reactive dyes.

L7 ANSWER 7 OF 11 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)

AB The invention relates to reactive dye mixts. containing at least one naphthalene-based disazo reactive dye (I; M = H, alkali metal; R1, R2 = aryl with vinyl sulfone reactive group), at least one benzene-based disazo reactive dye (II; M = H, alkali metal; R3, R4 =), or at least one other naphthalene-based disazo reactive dye (III; M = H, alkali metal; R5, R6, R7 = H, Cl-4-alkyl, Cl-4-alkoxy, carboxy, halogen, Cl-4-alkylcarbonylamino, benzoylamino, ureido; R8 = heterocyclic fiber-reactive group; a, b, c = 0-1; m, n = 0-2; p = 0-3). The dye mixts. may be produced by chemical or phys. means to provide good dyeing strengths on substrates such as cotton. An example was given which was based on a navy blue disazo naphthalene-based vinyl sulfone reactive dye and an orange benzene-based disazo vinyl sulfone reactive dye; deep black dyeings were obtained.

L7 ANSWER 9 OF 11 CAPLUS COPYRIGHT 2006 ACS on STN (Continued)

AB The invention relates to reactive dye mixts. containing at least one disazo reactive dye (I; M = H, alkali metal; R1, R2 = aryl with vinyl sulfone reactive group) and at least one monoazo reactive dye (II; R3 = aryl with vinyl sulfone reactive group; X = hydroxy, optionally substituted amino; n = 1, 2), their production by phys. or chemical means, and their use on substrates such as cotton to provide good dyeing strengths. Examples were given which incorporated a navy blue-dyeing disazo dye and an orange monoazo dye which together provided a fast black shade.

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB Mixts. of at least 2 of the 3 reactive azo dyes represented by I (R1 = Me, amino; R2 = H, Cl; X1 = diazo component based on benzene or naphthalene with 21 sulfo group), II (M = H, alkali metal; X2 = diazo component based on vinyl sulfone-containing or -generating benzene derivative; Y = F, Cl), and III (M = H, alkali metal; X3, X4 = diazo component based on vinyl sulfone-containing or -generating benzene derivative) are effective for dyeing of cotton in baths needing only 1-10 g salt electrolyte. In an example, a mixture of I (R1 = Me; R2 = Cl; X1 = 6,8-disulfo-2-naphthyl) 0.66, II (M = H; X2 = 4-(2-sulfatoethylsulfonfyl)phenyl; Y = F) 0.66, and III (M = H; X3 = 4-(2-sulfatoethylsulfonfyl)phenyl with p-attachment; X4 = 4-(2-sulfatoethylsulfonfyl)phenyl) 0.66 part in 1 L water containing 8 parts Na2CO3 dyed cotton in fast brown shades.

AB Disazo dyes (I: M = H, alkali metal; X1, X2 = diazo component containing vinyl sulfone or vinyl sulfone-forming group; one or both of X1 and X2 may contain a carboxamide group) are obtained by coupling of X1NH2 and X2NH2 with H acid or K acid. I are suitable as reactive navy blue dyes for cotton. Thus,
 4-amino-N-[4-(2-hydroxyethylsulfonyl)phenyl]benzamide was sulfated and diazotized and then coupled with 4-(2-sulfoethylsulfonyl)aniline-H acid to give a navy blue disazo dye, fast on cotton.
